

## Testimonial: Oday Jubran, DAAD scholar at the University of Freiburg

I started my Master's in Computer Science at the University of Freiburg in October 2009. The reasons why I chose this program are (i) because it is research oriented and (ii) students can specialize in one out of six areas. I also like that the curriculum comprises a variety of courses, seminars, lab courses, student/team projects and a master thesis. The Faculty of Engineering provides modern tools of teaching, such as lecture recordings and suitable classrooms. Moreover, the staff offers a highly professional level of teaching and advisory.

I'm specializing in Software Engineering, which I find interesting and challenging. I spend most of my time preparing exercise sheets and practical tasks, which requires much time and effort for research and analysis. Ever since I started this program, I felt a positive change in my way of thinking, analyzing, and dealing with complex tasks that are based on logic and scientific proofs.

If you are interested to study computer science in Freiburg, you should be ready to invest a lot of time and effort in your studies. The tasks that you will have to accomplish consume a lot of time, and the more time you are ready to invest the more you will benefit from this program.

Freiburg is one of the most adequate cities in Germany for student life. The city is located between the mountains of the black forest, where the sun shines a lot compared to other German cities, which is also a reason for a lot of solar industries and research institutions being based in Freiburg. Freiburg is located in the extreme south-west of Germany, on the borders of France and Switzerland with a lot of tourist destinations nearby. Moreover, living in Freiburg gives you the opportunity to get to know students from different countries and cultures, since the University of Freiburg is involved in many exchange programs.

Personally, I recommend any person, who is aiming to study in Germany, to apply for the University of Freiburg.

Oday Jubran, DAAD scholar at the University of Freiburg  
Master of Science in Computer Science

The Faculty of Engineering (University of Freiburg) offers the following Master programs:

- **Computer Science**
- **Bioinformatics and Systems Biology**
- **Microsystems Engineering**

Application deadlines: May 1 / June 1 for the winter semester

For more information and application details, please look at:

M. Sc. Microsystems Engineering: <http://www.imtek.de/mse>

M. Sc. Computer Science and M. Sc. Bioinformatics: <http://mcs.informatik.uni-freiburg.de>
