<td>Description/content</td>
<td>The field of Communications Engineering is dominated by progress in the areas of information and communication technology as well as information theory. It is also influenced by progress in the areas of microelectronics and their various applications, such as communication networks, mobile radio systems, optical transmission systems, signal processing systems (image/video, speech/audio), automation, robotics, automotive systems, and embedded systems. CORE subjects include: Estimation and Detection Theory, Mobile Radio Networks 1, Principles and</td>

</table>

Design of Communication Systems and Networks, and RF Systems

As required by the ever increasing complexity of the development of technology in the denoted areas, the graduates with a Master’s degree in Electrical Engineering, Information Technology, and Computer Engineering with a specialisation in Communications Engineering will have all of the necessary fundamental knowledge in classical electrical engineering, computer science, and communication technology. They will be able to develop complex systems via a hardware/software co-design methodology. They will have all of the necessary skills to perform the modelling, analysis, synthesis, and optimisation of such systems. They will further specialise in at least one of the application areas listed above, both in terms of theoretical background knowledge and practical skills.

Graduates in Electrical Engineering, Information Technology, and Computer Engineering with a specialisation in Communications Engineering will be able:

- to take technical-scientific questions from practice, to understand the problems, to formulate them, and then communicate them to others
- to analyse engineering and technology questions and formulate solutions
- to understand the impact of design activities on the life cycle of products
- to adequately report results and work practices both in writing and verbally using current technical language and terminology in order to persuade others about the benefits of new ideas and inventions
- to communicate adequately in their native language and in English

Course Details

Course organisation

The standard period of study is four full-time semesters (two years), including the preparation of the Master’s thesis. The course of study may be commenced in either semester.

The study programme consists of a range of mandatory or mandatory-elective modules that define the specific profile of the study programme.

This part of the curriculum is complemented by a large offer of laboratory work, project work, and seminars. In addition, there is a selection of possible courses that comprise courses from all other Master’s study programmes offered by the faculty. Finally, there is an assortment of elective courses from the entire RWTH course programme, including courses in economics and soft skills as well as language courses. German language courses are compulsory for all students who cannot certify a German language level of at least B1.

During the 18-week industrial internship, students will be trained in how to solve current engineering problems while working with renowned industry partners. This is often the first step towards the student’s future professional career.

The Master's thesis is an independent, predefined scientific project to be completed in a fixed period of six months. It is concluded by an oral presentation and defence of the results.

Successful completion of the study programme requires 120 ECTS credits overall in the various subject areas as defined below:

- mandatory and mandatory-elective modules from the subject area CORE subjects and ELECTIVE subjects of the selected study programme (graded exams) - 40 ECTS credits
- modules from the subject catalogue of GENERAL elective subjects from the overall Master’s course (graded exams) - 8 ECTS credits
- laboratory course or project as offered by the selected study programme (ungraded) - 4 ECTS credits
- graded seminar from the catalogue of seminars offered by the Faculty of Electrical Engineering and Information Technology - 4 ECTS credits
- ungraded soft skills, including a language course, one additional seminar (ungraded), and/or one to two additional lab courses or projects from the overall Master’s course (all study programmes included) - 12 ECTS credits
- ungraded industrial internship (including an internship-related seminar) - 22 ECTS credits
- Master’s thesis (including the required colloquium) - 30 ECTS credits
The Master's programme utilises the following basic forms of teaching to achieve the defined goals:

- lectures – a serial presentation of material, including specific methodologies
- tutorials – solidifying and deepening expert knowledge and capabilities by solving problems associated with the lecture material
- seminar work – the elaboration of complex questions and scientific knowledge (Students give oral presentations in the seminar.)
- intensive courses – compact intensive courses composed of lectures and tutorials

Important additional options for gaining technical competence are available, such as:

- semester and Master's projects completed in small groups or individually
- excursions
- practical (e.g., laboratory) work directly related to lectures
- a minimum of 18 weeks of industrial experience

A Diploma supplement will be issued

Yes

International elements

- Training in intercultural skills
- Study trips
- International guest lecturers
- Language training provided
- Projects with partners in Germany and abroad

Integrated internships

Students are required to complete an industrial internship for a minimum period of 18 weeks as an integrated and compulsory part of their curriculum. During the internship, students will be trained how to handle practical engineering problems. Flexibility and open-mindedness are major qualifications of an electrical engineer.

Special promotion / funding of the programme

- DAAD
- Other (e.g. state level)
- ERASMUS+
- Franco-German University (FGU)

Name of DAAD funding programme

KASP – King Abdullah Scholarship Programme IAESE - Praktikantenplätze für ausländische Studierende der Ingenieurwissenschaften Förderprogramme versch. Länder (Argentinien, Indien, Kolumbien, Kuwait, Mexiko, Oman, Tunesien, Vereinigte Arabische Emirate) RISE - Germany RISE - Professional

Course-specific, integrated German language courses

No

Course-specific, integrated English language courses

No

The course of study can be taken entirely online

No

Digital learning and teaching modules

- MOOCs
- Virtual classrooms
- Video learning
- Blogs
- Mobile learning apps
- Wikis

The continuous improvement of teaching is a high priority at RWTH Aachen University. This includes the use of didactically well-founded methods of blended learning. For many years, the lecturers of the faculty have been offering learning materials for their respective courses via the RWTH electronic learning portal. The materials initially consisted primarily of lecture scripts and exercises and solutions, the offers have been extended in recent years to include lecture recordings and electronic homework. Since the summer semester of 2019 we are using the e-learning platform RWTH moodle with a lot of interactive features like videos, presentations and fact sheets combined with surveys.

The funding for the digitisation of teaching currently amounts to 550,000 EUR.

| Participation in the e-learning course elements is compulsory | No |
| Can ECTS points be acquired by taking the online programmes? | No |
| Can the e-learning elements be taken without signing up for the course of study? | Yes |

**Costs / Funding**

| Tuition fees per semester in EUR | None |
| Semester contribution | Approx. 280 EUR student services contribution per semester |
| The fee includes a semester ticket covering public transport in all of North Rhine-Westphalia. |
| Costs of living | The cost of living and studying, including food, accommodation, personal and social expenses, and study-related costs, is estimated to be 1,000 EUR per month. |
| Please note that single individuals have to give proof of a minimum income of 720 EUR per month at the immigration office in Aachen in order to be eligible for an extension of the residence permit (as of March 2019). |
| Funding opportunities within the university | Yes |
| Description of the above-mentioned funding opportunities within the university | Unlike other university systems, German universities do not offer full-coverage scholarships. Prospective and current RWTH students, however, may apply for a scholarship from the Education Fund, which is worth 300 EUR per month: http://www.rwth-aachen.de/go/id/elu/lidx/1 |
| Additionally, there are a number of trusts and foundations which offer scholarships. A full list of programmes and foundations can be found in the RWTH Scholarships Database: http://www.rwth-aachen.de/go/id/ehg/lidx/1 |

**Requirements / Registration**
1. In order to apply to the RWTH Master's programme Electrical Engineering, Information Technology, and Computer Engineering with a specialisation in Communications Engineering, applicants should have completed their basic studies (Bachelor of Science or Engineering or an equivalent academic degree) at an internationally recognised university. The basic study should fulfill both the subject requirements listed below and those listed in detail on the homepage of the Faculty of Electrical Engineering and Information Technology (https://bit.ly/2FaAyk7).

- at least 28 ECTS credits for advanced mathematics
- at least 10 ECTS credits for physics and physical principles of electronic devices
- at least 34 ECTS credits for fundamentals of electrical engineering including circuit technology
- at least 12 ECTS credits for informatics (computer science) and programming
- at least 8 ECTS credits for fundamentals of control and mathematical systems theory
- at least 8 ECTS credits for advanced electromagnetic field theory or theoretical information theory
- at least 20 ECTS credits for application-oriented courses

2. In addition, at the time of application, all applicants are obliged to prove that they have taken the Graduate Record Examination (GRE) General Test and received the following scores: above 75% of all test takers in the subject area quantitative reasoning and above 15% of all test takers in the subject area verbal reasoning as indicated in the official GRE test report. Applicants who are citizens of a member state of the European Union or the European Economic Area (EEA) as well as those with prior educational qualifications from Germany (so-called “Bildungsinländer”) are exempt from this rule.

3. Conditional admissions are possible. In this case, additional study requirements have to be fulfilled. Conditional admissions are only possible as long as the additional requirements to be fulfilled do not exceed 30 credit points.

4. Admission to this Master's course requires proof of an adequate knowledge of the English language (see below).

| Language requirements | Admission to this study programme requires proof of adequate knowledge of the English language (TOEFL-iBT 90, IELTS 5.5, or equivalent).

International students who cannot provide proof of German language skills at level B1 or better (according to the CEFR) are obliged to take German language courses as part of their curriculum (equivalent to 8 ECTS credits). |

| Application deadline | Non-EU applicants: 1 March for the following winter semester  
EU applicants: 15 July for the following winter semester

Non-EU applicants: 1 September for the following summer semester  
EU applicants: 15 January for the following summer semester |

| Submit application to | Online application: http://www.rwth-aachen.de/cms/root/Studium/Vor-dem-Studium/Bewerbung-um-einen-Studienplatz/Master-Bewerbung/~dqml/Bewerbung-Master-Internationale/?lidx=1 |

**Services**

**Possibility of finding part-time employment**

International students have very limited work opportunities while studying. Therefore, it is not possible to finance your entire studies through working alone. There are teaching and research assistant positions available at the involved institutes. These are, however, only awarded to students who have already started their academic studies in a programme. Students working as a teaching or research assistant may work a maximum of 19 hours a week but will usually not earn enough to cover all of their living expenses. By law, a student from outside the EU is permitted to
work either 120 full days or 240 half days per calendar year. We do caution students to be careful about taking on outside work commitments, as completing a Master’s degree within the designated two years will be difficult if a student spends too much time away from his or her studies.

### Accommodation

RWTH Aachen University has a limited number of dorm rooms and studio apartments. However, there are usually waiting lists for these rooms, and students will probably need to find private accommodation first. There are a number of options for finding private accommodation in and around Aachen, and the International Office can provide students with information beforehand or upon arrival.

For a furnished room, the average rent per month is about 300 EUR. For a two- to three-room flat, the average rent per month starts at 500 EUR.

Please note that there is only a very limited number of family apartments in the university dorms, which is why students who bring their spouses or families with them will most likely need to find private accommodation. Rooms in university dorms cost between 180 EUR and 450 EUR, depending on room size.

For short-term accommodation, there are many hotels and a youth hostel.

### Career advisory service

- Departmental academic adviser
- Mentoring
- Career Centre RWTH

### Specific specialist or non-specialist support for international students and doctoral candidates

- Welcome event
- Buddy programme
- Tutors
- Cultural and linguistic preparation
With 260 institutes in nine faculties, RWTH Aachen University is one of Europe’s leading institutions for science and research. Currently, more than 45,000 students are enrolled in 157 academic programmes. More than 10,000 of them are international students hailing from 125 different countries. The scientific education students receive at RWTH Aachen University is firmly rooted in real-world application. As a result, our graduates are highly sought after by businesses to work as trainees and fill executive positions. National and international rankings show that our graduates have a high aptitude for managing complex tasks, constructively solving problems in teams, and taking on leadership responsibilities. Thus, it should come as no surprise that one in five board members of German corporations is an alumnus of RWTH Aachen University.

Work conducted in the research centres at RWTH Aachen University is strongly oriented towards the current needs of industry, commerce, and the professions. This has resulted in numerous innovations, patents, and licences. The individual competence centres at RWTH Aachen University collaborate effectively across departments and faculties in interdisciplinary groups and forums, while still maintaining a strong focus on their own department specialisation. For instance, the computer science and biology departments - and even the social sciences - all have a clear connection to the school’s engineering focus. This has been a crucial factor in motivating multinational corporations such as Philips, Microsoft, and Ford to locate their research institutions in the Aachen region.

Excellence in teaching and research constitutes the basis from which RWTH Aachen University works with other leading institutions and technical universities around the world.

University Location

As Germany’s westernmost city, Aachen is located on the borders of Belgium and the Netherlands. Its population is about 256,000. Aachen’s historic centre around the distinctive cathedral (UNESCO world heritage site) is characterised by a student lifestyle. At the city’s doorstep, the hilly Eifel landscape with its rivers, lakes, and forests offers a picturesque countryside for outdoor recreation. Aachen benefits from its central location in the heart of Europe!
