RISE Professional 2020
Research Internships in Science and Engineering

Summer Internships with German Companies

There are only few scholarship programs offering a working experience abroad. To meet this need, DAAD (German Academic Exchange Service) has created unique opportunities for science and engineering students from the United States, Canada, Great Britain and Ireland interested in gaining serious practical, career-building experience in Germany through our RISE Professional program.

Length of Internship

RISE Professional offers 10 weeks to 3-month internships (flexible dates, between May 15th and December 31st, 2019), with a company or non-university research institution in Germany having a strong reference to industry.

Who can apply?

Enrolled graduate students (Master and PhD candidates) from North American, U.K. or Irish universities in the fields of biology, chemistry, computer science, physics, earth science or engineering (or a closely related field) are invited to apply. Undergraduates who are RISE Germany alumni are also eligible. Applicants must prove their enrolment at the time of the internship. Recent graduates are not eligible. German language requirements depend on the internship placement.

Scholarship

All participants receive a scholarship financed by DAAD and their host company to help cover living expenses. Each scholarship holder will receive a monthly scholarship, a lump sum for travel expenses and a travel reimbursement for the trip to the three-days scholarship meeting in Heidelberg. DAAD also provides health insurance.

Application timeframe

The internship database is open between November 1, 2019 and December 15, 2019. You must submit your application online through the RISE Professional database.
